

Stationary Coolant Conditioning

In order to operate a test stand to full capacity, the flexibility of the conditioning system is a main criteria. We engineer and manufacture conditioning systems for hydraulic- and gear oil as well as water-glycol mixture. In the centre of attention are the functions cooling, heating and conditioning. Because of the variable operating states the system is made for wide variety of different applications.

- **Build for a wide range of applications**

- Variable flowrate
- Variable operating temperature
- Variable operating pressure
- Optical display
- Digital display
- Test ports
